Terms of Service – Accuracy & Updates

BinBase.com warrants, and Buyer understands, that the accuracy of the BIN database exceeds 99 percent. BinBase.com works continuously to update and maintain accurate and timely records. *Buyer understands and agrees that 100 percent accuracy of a BIN database is a goal but cannot be guaranteed.*

Because there exists no 100 percent full compilation of BIN numbers, BinBase.com cannot guarantee 100 percent possible coverage. Some records in the BinBase.com database lack data for "card type;" this is quite common with MasterCard records. Practically all MasterCard records (those beginning with 5*) lack Field3 and Field4 information. Official card issuers, for unknown reasons, do not supply their agents with this information, so (at least for now) this is an issue beyond the control of BinBase.com. The company continuously works to maintain accurate records and up-to-date information, and regularly updates database records. **It's important to BinBase.com to provide Buyers with the most accurate possible database, but Buyer understands and agrees that 100 percent accuracy is not possible.**

Terms of Delivery

The BinBase.com BIN database is provided in a semicolon-delimited format accessible with a text editor program or spreadsheet software. The database is ISO compliant and features four additional ISO parameters included in each record: country name, country codes A2 and A3, and country number.

BinBase.com sells rights to its BIN database and provides the data contained therein in the form of a .zip file delivered as an email attachment -- usually within 24 hours. For security reasons, BinBase.com does not offer the database in downloadable format from its website, nor is online access to our database provided.

Database delivery package includes database in CSV and XML format, as well as BIN lookup software to perform quick filtering tasks on local Windows machine.
